

You are cordially invited to attend

The Online Conference

Data Privacy & Security

14 May 2020, From 17:00

Data is an essential component in modern life communications and transactions. For legal, professional, ethical, and compliance reasons, the preservation of data privacy and security is essential. Nonetheless, data privacy and security are under continuous threat, by numerous adverse actions. The massive disruptions created globally by the COVID-19 pandemic, which led to a significant increase in the use of information systems, further highlight the importance of ensuring data privacy and security.

Effectively protecting data privacy and security requires a holistic understanding of all aspects involved, as well as their associated interrelationships. This event is part of the quest to understand, enhance, and empower data privacy and security, as part of the larger cybersecurity framework. The Conference aims to get under a “smart microscope” and analyze some very important topics related to data privacy and security and to initiate or extend the collaboration between the event participants. The key Conference topics will be: threats to data privacy and security; legal requirements and issues in data privacy and security; preparation for and handling of data breaches; aspects involved in the protection of health data; the role of artificial intelligence in ensuring data privacy and security.

Speakers

Mr. Dan CIMPEAN, Director General, Computer Emergency Response Team (CERT-RO)

Ms. Grațiela MĂGDĂLINOIU, President, Information Systems Audit and Control Association (ISACA) - Romania Chapter
